"Airway Larry" simulates a non-anesthetized patient for practicing intubation, ventilation, suction, and CPR techniques. Features anatomy and landmarks including teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false cords, true vocal cords, trachea, esophagus, and cricoid cartilage. The trainer allows you to practice oral, digital, and nasal intubation, as well as E.T., E.O.A., P.T.L., L.M.A., Combitube® and KING System insertion. Suction techniques and proper cuff inflation may also be practiced and evaluated. This trainer has room to maneuver, and a slightly anterior position, making it a great trainer for introductory classes as well as advanced students. Also, applying cricoid pressure changes the position of the trachea and closes the esophagus, so the Sellick maneuver can be realistically practiced. Features durable, rugged, one-piece construction. Lungs and stomach not included. See LF03605U and LF03606U on page 93 for lungs and stomach.

Has ability to be attached to either CPARLENE® or Resusci® Anne™* brand CPR manikins, making it a modular component for the Life/form® CRiSis™ Manikin. This feature allows you to teach intubation and basic CPR on the same manikin. Comes with pump spray lubricant.

Optional Accessories
