The BSE simulator received top marks at a recent global health meeting. Health care professionals were elated with its realism, durability, and texture.

- Teaching is made easy and realistic since the BSE simulator may be used in either the vertical or reclining position
- Each breast may be detached from the simulator
- One breast has nine lumps from 3 mm to 25 mm in diameter
- Abnormal breast includes two lumps beneath the arm
- Three lumps may be palpated easily; six are extremely subtle
- Teach the spiral or grid pattern to improve detection techniques
- Use this simulator, stress the need for monthly self-examination, encourage the recording of results and prompt reporting of any unusual findings to a health care professional
- Instruction manual
- Carrying bag
