Life-size

According Prof. J. W. Rohena, M.D., Department of Anatomy, University of Erlangen.

Model has 14 single items, which are simply removable and back pluggable thanks connector pins

Cavilla, occipital bone and pair of temporal bones create skull base, pair of parietal bones and frontal bone are attachable to front of the cavilla. Facial part of skull is complete after connection right and left upper jaw - each contains lacrimal and nose bone and palatine bone.

Facial and cranial bones are joined together on each side of cheekbone, which can be individually taken off. Lower jaw is attached to the skull on each side of the roller joints.
