Life-size

According to Prof. Dr. JW Rohena, Department of Anatomy, University of Erlangen.

Model has 18 parts. Out of cranium (frontal, parietal, occipital and sphenoid bone) are bones removed and easily deployable and bones of the skull base (ethmoid bone, vomer, palate, cheekbone, upper and lower jaw) and lower nasal concha. Thanks to the perfect elaboration model is easily collapsible, and it serves to better understand the location of various bones and sinuses.
