Graphically depicting the grisly effects of methamphetamine on the mouth, this display is ideal for colleges, law enforcement agencies, and other organizations looking to give teens and young adults compelling reasons to stay away from meth. The 3-D, handpainted mouth model shows consequences of meth use such as missing teeth, severely decayed teeth, broken teeth, receding gums, and more. Also includes a tongue model with an ulcer. Informative text explains how meth harms both the mouth and body and drives home the message that meth is a dangerous drug.
