AirSim Baby X is the most anatomically correct pediatric airway trainer for teaching and training infant airway management. Features accurate internal and external anatomical details based on a CT-DICOM data from a 5-month-old infant. Medical professionals get efficient, realistic practice in pediatric intubation, laryngoscopy, ventilation and supraglottic device insertion.

Model Features

- AirSim X airway is certified to practice 20,000 intubation cycles without fail
- Replaceable lung bags provide realistic feedback during technique training
- User feedback through the visualization of stomach inflation & lung expansion
- True to life external & internal anatomical features allow for easy demonstration of all pediatric video laryngoscopes
- Realistic skin covering with lifelike texture
- Modular design allowing for all parts to be changed within your organization

Medical Procedure Training

- Double nasotracheal intubation
- Endotracheal tube insertion
- Bag-valve mask (BVM) ventilation techniques
- Laryngeal Mask Airway (LMA)
- Full range of supraglottic device insertion
- Direct and video laryngoscopy

Package contents
