A unique, life size whole body phantom for CT provides a variety of educational application as well as visual evaluation in finding out optimal scanning conditions. The phantom can also be used for plain X-ray, showing life-like images. No metal parts or liquid structure are used.

Main joints have close-to human articulation, allowing various positioning for training. The phantom can be disassembled into 10 parts. Improved shoulder joint system enables PBU-60 to take arm-up position. Organs are anatomically correct and have appropriate HU numbers.

Features

Patient positioning:

Shoulders: rotate through a full 360 degrees in the sagittal plane, approx. 180 degrees to side-ways.

Hip joints: rotate forward up to approx. 90 degrees, then abduct up to 45 degrees each.

Knees: bend up to approx. 90 degrees.

Elbows: bend up to approx. 90 degrees.

- The phantom can be held in the supine frog leg position.
- The limbs and head are detachable at joints and neck for wider applications.
- The head supporter facilitates various head positions.
