Difficult Airway Management Simulator Evaluation System is the world exclusive system that offers objective feedback on intubation skills carried out by "hands-on" with the true-to-life airway manikin real instruments. Real time visualization of performance on each evaluation point helps to assess trainee's skill as well as to identify the area where trainee needs further improvement.

Features:

- Touch panel allows for easy adjustment of Airway Managementi settings.
- 6 evaluation points can be displayed on the monitor.
 - 1. Sniffing position
 - 2. Force on incisor
 - 3. Force on tongue
 - 4. Lift epiglottis
 - 5. Tube positioning
 - 6. Cuff pressure
- Recording each trainee's procedure and their evaluations are useful for their review.
- Intubation difficulty can be classified by level
- All-in-one unit is convenient for training
