# LAP Mentor VR

The breathtaking setting of a Virtual Operating Room defines the new concept for laparoscopic training. The trainee practicing on the LAP Mentor™ simulator wears a VR headset, and is fully immersed in an operating room environment including a virtual OR team, a patient, equipment and real life sound distractions. This setting provides the most true-to-life experience and teaches trainees how to cope with the stressful, and at times distracting, operating room atmosphere.

## LAP MENTOR PLATFORMS

### State-of-the-Art Laparoscopic Simulators

The LAP Mentor simulators are cost-effective laparoscopic training simulators that use innovative learning tools. Each platform is fully compatible with all simulation modules from basic laparoscopic tasks and suturing (with interchangeable suturing handles), to complete procedure training. The LAP Mentor platform enables constant addition of new modules.

### LAP Mentor III

The newly designed platform addresses all ergonomic needs essential for comfortably practicing laparoscopic skills and procedures including adjustable height and optimal monitor position to ensure maintaining an ideal posture and hands position for long periods of training.

A tactile experience of tissue resistance feedback via the surgical tools provides a true-to-life feel of performing laparoscopic surgery.

### LAP Mentor Express

The non-haptic laparoscopic training system is available either as a standalone portable desktop platform or with an optional height adjustable tower, which includes a touch screen.

# Widest Array of Hands-on Laparoscopic Training

The Symbionix LAP Mentor Simulator
