Full body models have feel and weight of live animals and have replaceable heads for use with non penetrating captive bolts. Used for training animal positioning and bolt placement. Each head can endure multiple shots. Each body includes 2 replaceable heads.

All head models are equipped with a reusable brain canisters with skull plate and skin or hair covering. The brain is a dimensionally accurate biological representation.

The targeting brain canisters can be removed and opened to show the shot accuracy, bolt track, depth of penetration.

Penetrating models- each head includes 2 reusable silicone canisters with 4 skull/hair plates
