Set of 9 bovine cervixes allows for hands-on training of artificial insemination, from young bovine first-time reproduction to larger cervixes that represent older bovine reproductive tracts. Six of the 9 cervixes are compatible with the Bovine Breeder artificial insemination simulator.

Product includes:

- 3 small cervixes (don't fit in Bovine Breeder)
- 6 larger cervixes (will fit in the Bovine Breeder)
- Difficulty levels within the different cervixes to help students increase skill

Purpose:

- This works with our Bovine Breeder product, allowing 6 of the 9 cervix models being able to fit directly into the Bovine Breeder reproductive tract and allow multiple students to practice at the same time.

Position:

- Allow multiple students to be able to practice different types of cervix positioning for Bovine Artificial Insemination, allowing for many to practice while, one or two are using the Bovine Breeder
- Students will learn that every cervix of a cow is different, some easier (usually heifers – young cows) and some more difficult (usually older, breed many time cows), so our product allows for these various types of cervix to be practiced and skill to be learned on
