Introducing highly accurate and lifelike full term baby manikin designed and manufactured at the world famous Elstree Film Studios in London, UK. Based on scans of real babies, lifelike features such as cannulatable umbilical cord, visible veins, ALS compatible airways and hand punched real hair are available. The full term baby is also available in a range of ethnicities.

Lifecast pre-term and full term babies encourage more natural handling, bringing a new level of realism to medical training and demonstrate our belief in building simulation training tools that create emotional attachment and engagement.
