Parameters

Quantitative unit

ks

Electronic microprocessor-controlled temperature regulator for demanding heat applications. The user has the choice between a direct terminal connection or a combined connection for heating and sensor through a 7-pin socket. The transparent lid protects against unintentional adjustment of the temperature setting.

- Switching capacity: 2300 W
- Temperature range: 0 – 950°C
- Connection: terminals
- Switching current: 10 A
- Nominal voltage: 230 V AC
