Rocks

Attractively designed wall-mounted showcase represents typical representatives of rocks not only from our region, but from all around the world. Rocks are divided into groups: igneous, metamorphic and sedimentary in the number of 28 exhibits. These are typical representatives which pupils and teachers know from natural sciences textbooks. Dimensions of showcase are 100×80 cm. The showcase is wooden with glass shelves and is covered with protective glass. It attaches to the wall on a massive bracket. Showcase is accompanied by educational material for teachers and by information chart. This educational tool is suitable for both basic and secondary schools. It is ideal for combination with showcase "The evolution of life on Earth". Exhibits in showcase are of a high quality and are collection items.
