Attractively designed wall-mounted showcase represents typical representatives of minerals not only from our region, but from all around the world. Minerals are divided into these groups: elements, sulfides, halides, oxides, carbonates, sulfates, silicates in the number of 35 exhibits. These are typical representatives which pupils and teachers know from natural sciences textbooks. Dimensions of showcase is 100×80 cm. The showcase is wooden with glass shelves and is covered with protective glass. It attaches to the wall on a massive bracket. Showcase is accompanied by information chart. This educational tool is suitable for both basic and secondary schools. It is ideal for combination with showcase "The evolution of life on Earth". Exhibits in showcase are of a high quality and are collections items on which, for example, a crystal system can be clearly recognized.
