The **MODEL-med® Gynaecological Simulator** is a highly realistic simulation of the female reproductive organs. Made from a very life-like material, it allows the medical practitioner to practice everyday procedures such as bi-manual palpation, pap-smears, and the use of the speculum.

The MODEL-med® Gynaecological Simulator is so easy to use!

To change over a uterus, simply put a small amount of lubricant on the cervix and slide the uterus into the cavity at the back of the model until it seats down into the vagina. It is that easy. To swap over another uterus, simply slide the current one out and slide in the one you want.

The MODEL-med® Gynaecological Simulator is made of a very soft, highly elastic, and very durable material. It is easy to clean and following simple maintenance instructions ensures the models will last a long time. They are also easy to repair if they are accidentally damaged.
