Quantitative unit

ks

Nordic Recorder is part of the Nordic Simulators product family, which is controlled by Nordic own easy-to-use recording and debriefing software.

The product has been developed in collaboration with professionals in the simulation world; resulting in a high-quality, very easy to use and versatile system.

Nordic Recorder uses high-quality HD digital cameras, some with built-in microphones.

The cameras have infrared lights, so the system records in simulation training mode even without lighting. Night videography can be used, for example, when practicing for special conditions under power outages or military field medicine.

Nordic system operates on a closed network that ensures a high level of data security.
