Parameters

Quantitative unit

ks

This military training manikin has all the features you need for TCCC and TECC training. The life-size manikin (183cm) weighs 70kg and has movable extremities.

Various injuries can be attached to the manikin to simulate a wide variety of wounds. First aid measures such as supraglottic airway management, decompression puncture (Monaldi), chest drainage (Bülau), FAST1 (sternum), EZ IO (humerus and tibia), and tourniquet attachment are possible.

The manikin is robust and can be used to practice evacuation from the danger area.

Three included deep wounds can be applied to 7 sites and connected to an optional bleeding module, allowing practice of wound packing.

A speaker built into the manikin's head allows it to either speak directly from the manikin or play back previously recorded speech or sounds.
