The mini hip joint model has been reduced to a half of natural size but has kept all of the functionality of larger hip joint models. In addition to the external anatomical structures, the hip joint cross-section mounted on the base, the medical or teaching professional now has the possibility to explain what is happening from "within" the hip joint. This mini hip joint is a great way to study the anatomy of the human body.

Dimensions: 16 × 12 × 20 cm

Weight: 290 g
