Parameters

Device type

Device

Quantitative unit

ks

- sieving with air jet technology for dispersion and desagglomeration of fine powders
- collection of two fractions possible by use of cyclone
- air jet produced by a powerful industrial vacuum cleaner
- fulfils all criteria for measuring equipment related to ISO 9001
- easy operation, ergonomic design
- maintenance-free
- Open Mesh Function to reduce the number of near-mesh particles

- high flexibility through adjustable nozzle speed
- operation with standard Retsch sieves, 203 mm or 200 mm (with adapter)
- free manual (standard) or automatic (accessory) pressure regulation
- optional software EasySieve for control through RS232 serial interface, easy evaluation and documentation of results
- free digital adjustment of all process parameters (time, vacuum, speed)
- memory for up to 9 SOPs, additional Quick Start mode
- silent operation due to integrated silencer
