CPR Cube is a hands-only CPR training aid that assists anyone to master chest compression without using expensive CPR manikins. The compression depth feels similar to a human chest with real-time feedback in accordance with European and UK Resuscitation Guidelines.

It is the simplest CPR training aid ever, but smart enough to provide the most essential CPR training you need. It enables users to have fun, immersive education through visual, auditory, and tactile feedback.

- Sound guide will be given when appropriate depth and recoil of compression applied.
- If you succeed 16 times in a row then LEDs revolve around the cube to express the blood flow.
- It vibrates when 16 continuous successful compressions are applied.
