The Five-Year-Old PEDI® Nursing Care Patient Simulator is designed to help participants practice and develop pediatric nursing care and resuscitation skills. The S155 includes an intubatable airway, an injection training arm, an intraosseous injection leg, and appropriate arterial/venous system to ensure participants in ALS training programs receive hands-on training.

Fully articulating

Articulating head, neck, and jaw permits head tilt/chin lift, jaw thrust, and neck extension into the "sniffing" position.

Intubatable airway

Anatomically accurate airway with cricoid cartilage permitting intubation, suctioning, and the Sellick maneuver.

Intraosseous access

Intraosseous infusion and injection system with realistic tibia bones. Allows infusion of fluids, blood and/or drugs directly into the bone marrow of the tibia.
